Part 1

AXC 3050

FL SWITCH

WLAN

PSU

AXL BK PN – 2688019+8DI 8DO 2 AI 4AO

AXL BK PN – 2688019+8DI 8DO 2 AI 4AO

8DI 8DO **4 AO 2 AI**

The image displays a variety of industrial automation hardware. At the top left is a grey box labeled 'AXC 3050'. To its right is a 'FL SWITCH' by Phoenix Contact, featuring a control panel with a 'STOP' button, indicator lights, and a terminal block. Further right is a 'WLAN' module, a green and black device with an antenna. Below these are a 'PSU' (power supply unit) and two 'AXL BK PN' modules. Each 'AXL BK PN' module is shown with its front panel and a rack of I/O modules. Below the first 'AXL BK PN' module are two I/O modules: one labeled '8DI 8DO' and another labeled '4 AO 2 AI'. Similar I/O modules are shown below the second 'AXL BK PN' module.

Part 2

FL BT MOD IO AP
WLAN

FL NP PND-4TX PB - 2985071

PSU

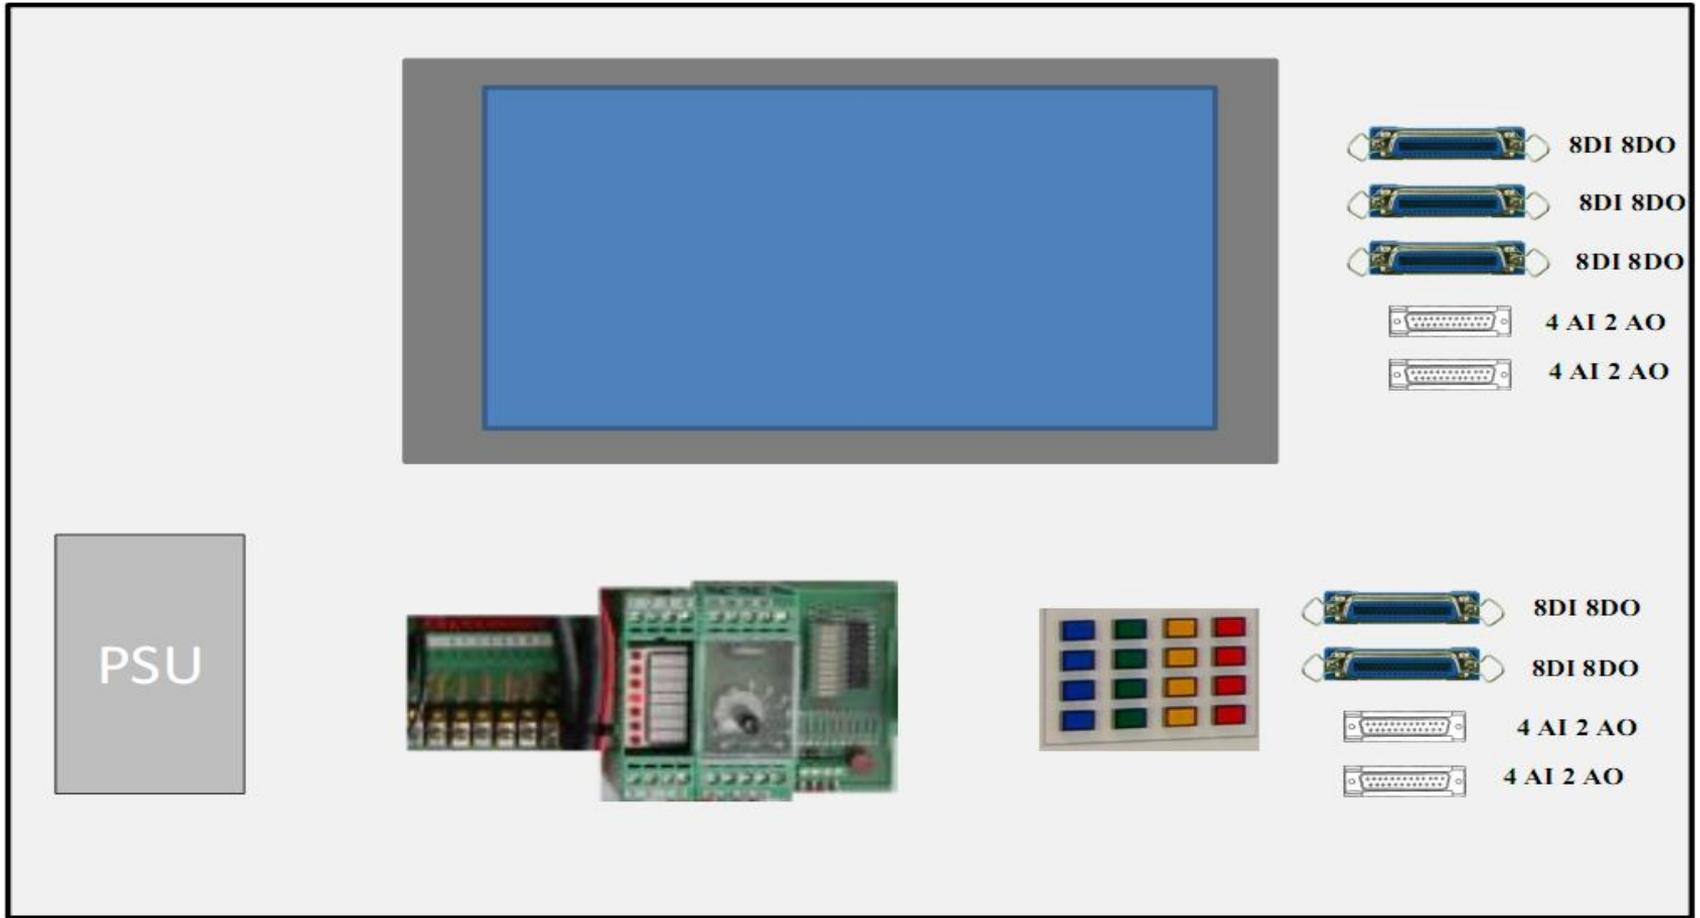

AXL F BK PB - 2688530

Siemens PB BK

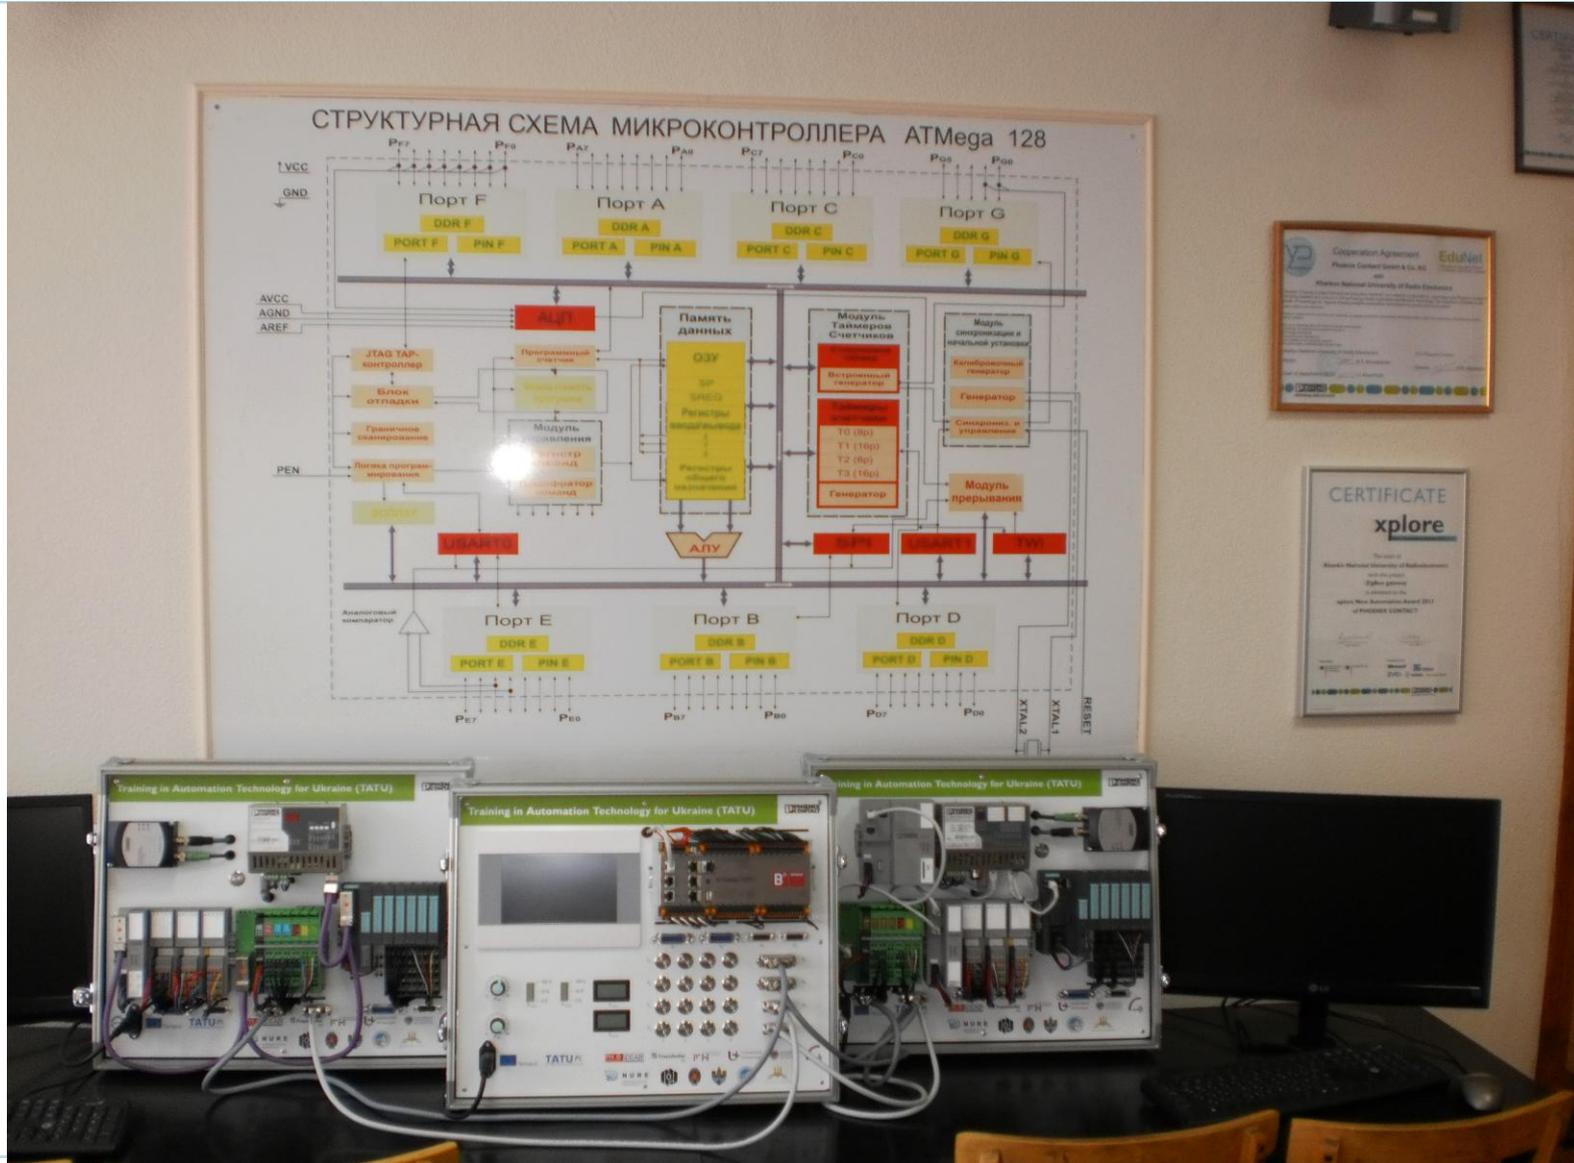

IL PB BK DI8 DO4/EF-PAC

Part 3

TSL in KNURE

Capabilities

- PC Worx
- CoDeSys
- PROFIBUS
- Profinet
- Wireless technology
- OPC
- Real-time systems

Expectations from the project and the prospect of the use of equipment

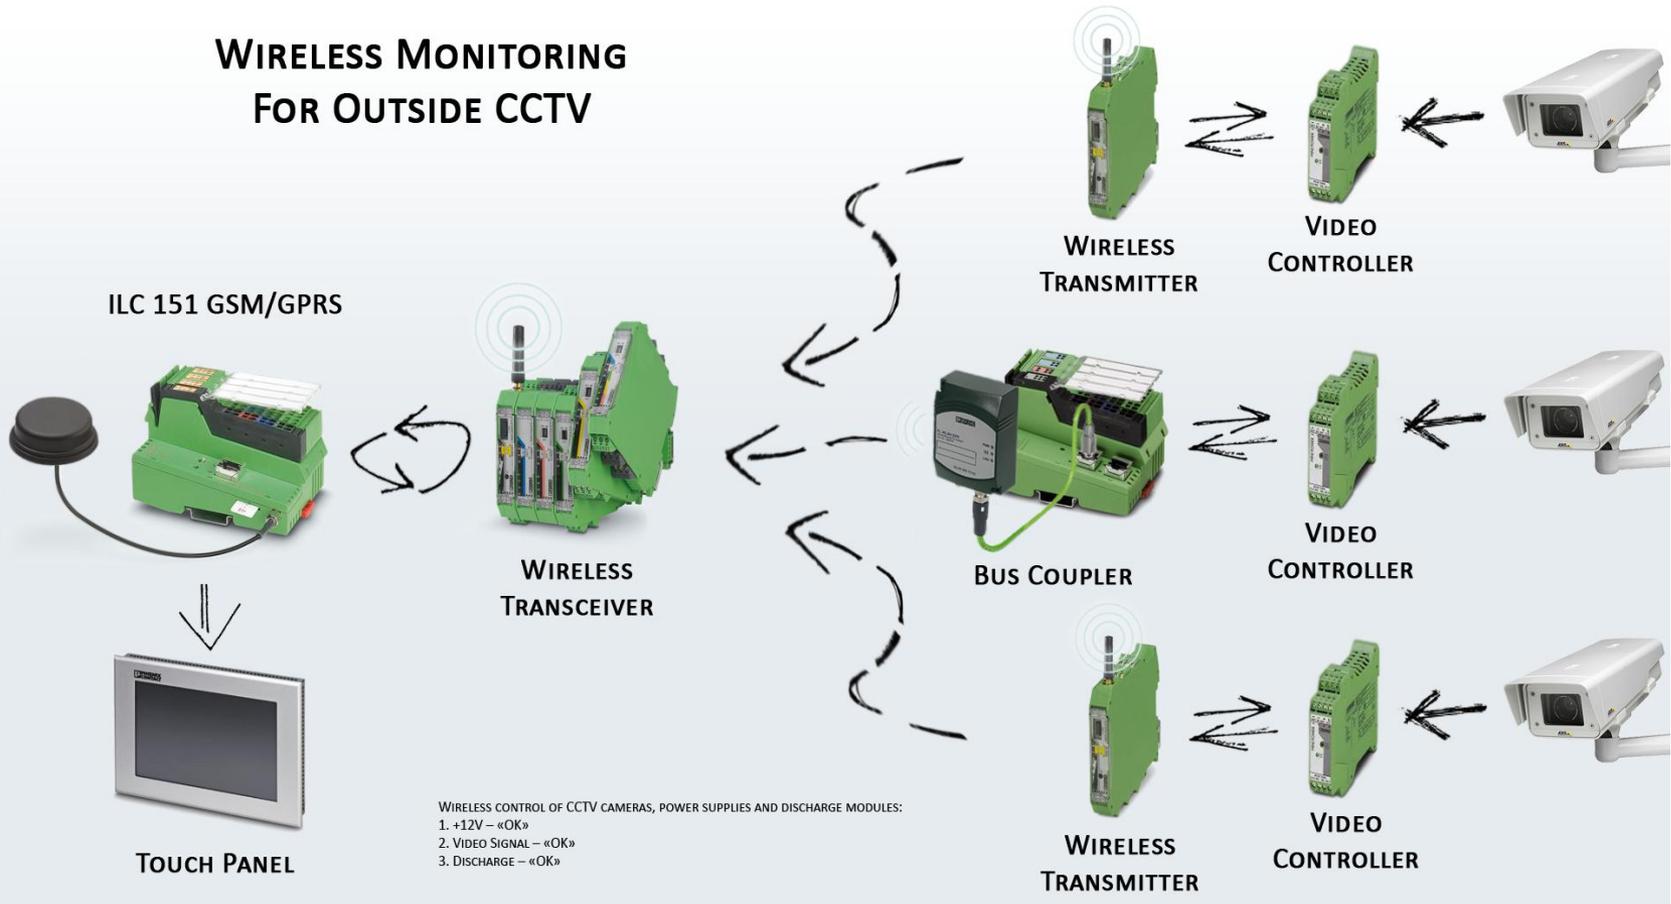

- Creating a center for industrial automation (403i) in the KNURE. DOED
- Bachelor Avionics Support
- Support Automation Engineering master's program
- Support for Embedded Systems master's program
- Using the support of the educational process department RES, DOEA, Technology and automation of production.

Expectations from the project and the prospect of the use of equipment

- Continuation of the project under the Erasmus program (KA-1)
- Cooperation with partner universities directly
- Dual Degree in Automation Engineering M.Sc.
- Dual Degree in Master's degree in Embedded Systems

Examples Design of intelligent automation equipment

WIRELESS MONITORING FOR OUTSIDE CCTV

High-cost mounting procedure

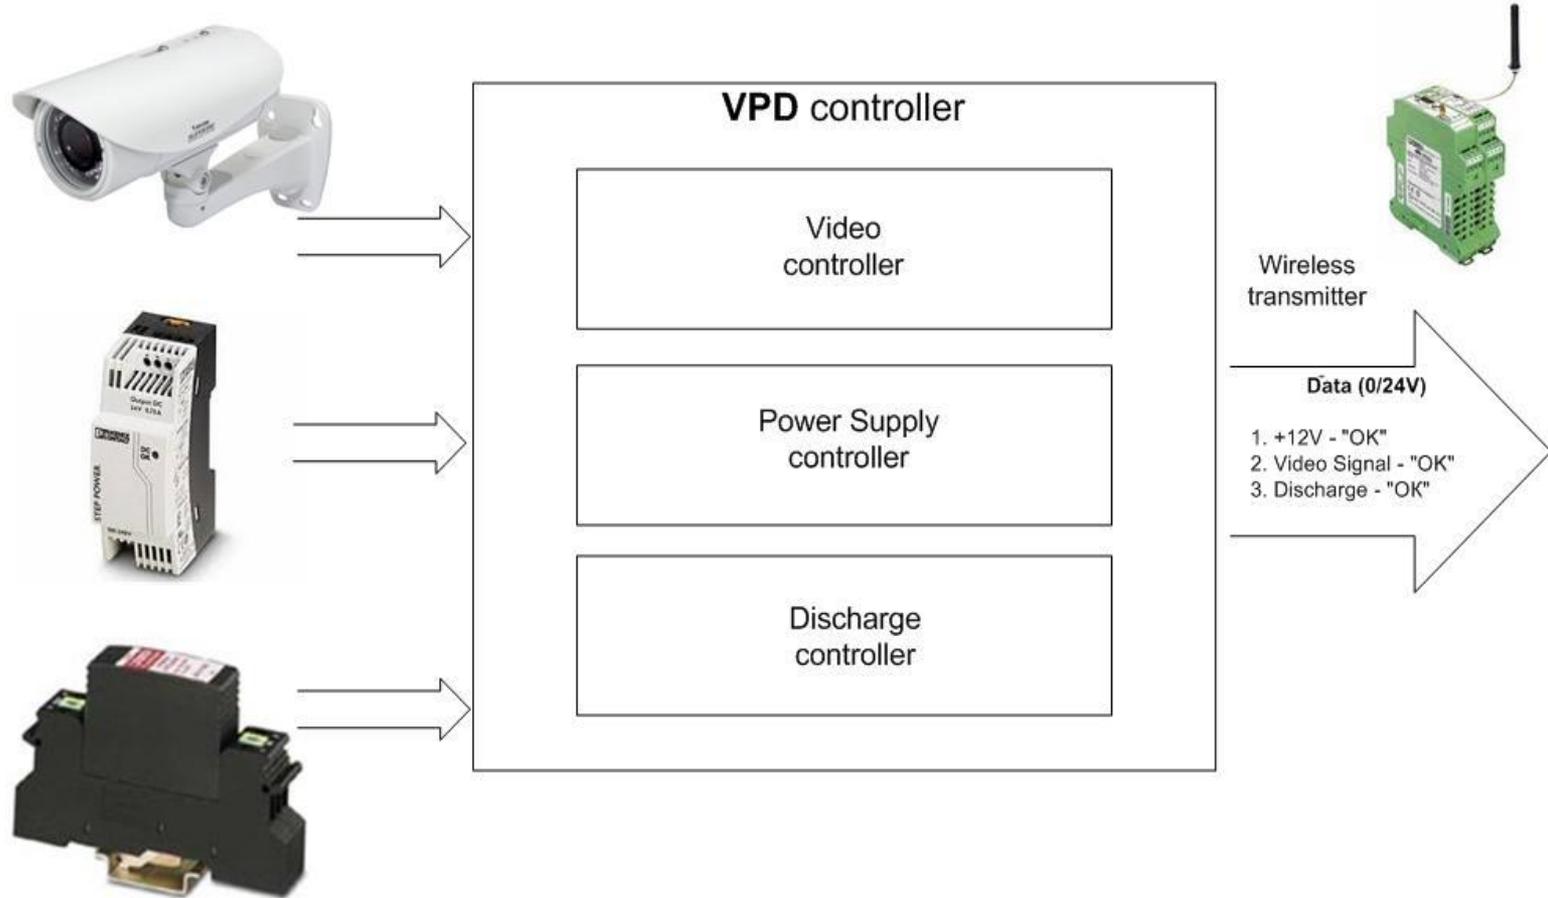

The VPD or Video Power Discharge controller

- The controller performs monitoring over the CCTV camera, its power supply unit and the defense discharging module.
- The idea is to combine the three controllers into a single device provided with 24 volts output for making integration with any Phoenix Contact devices easier.
- Implementation of CCTV WIRELESS MONITORING will decrease the CCTV maintenance cost mainly because it eliminates dismantling of properly functioning equipment.

VPD

VPD controller structure

How it works?

- Low voltage equals to 10V or less;
- Normal voltage is between 10V and 13V;
- Overvoltage is more than 13V.

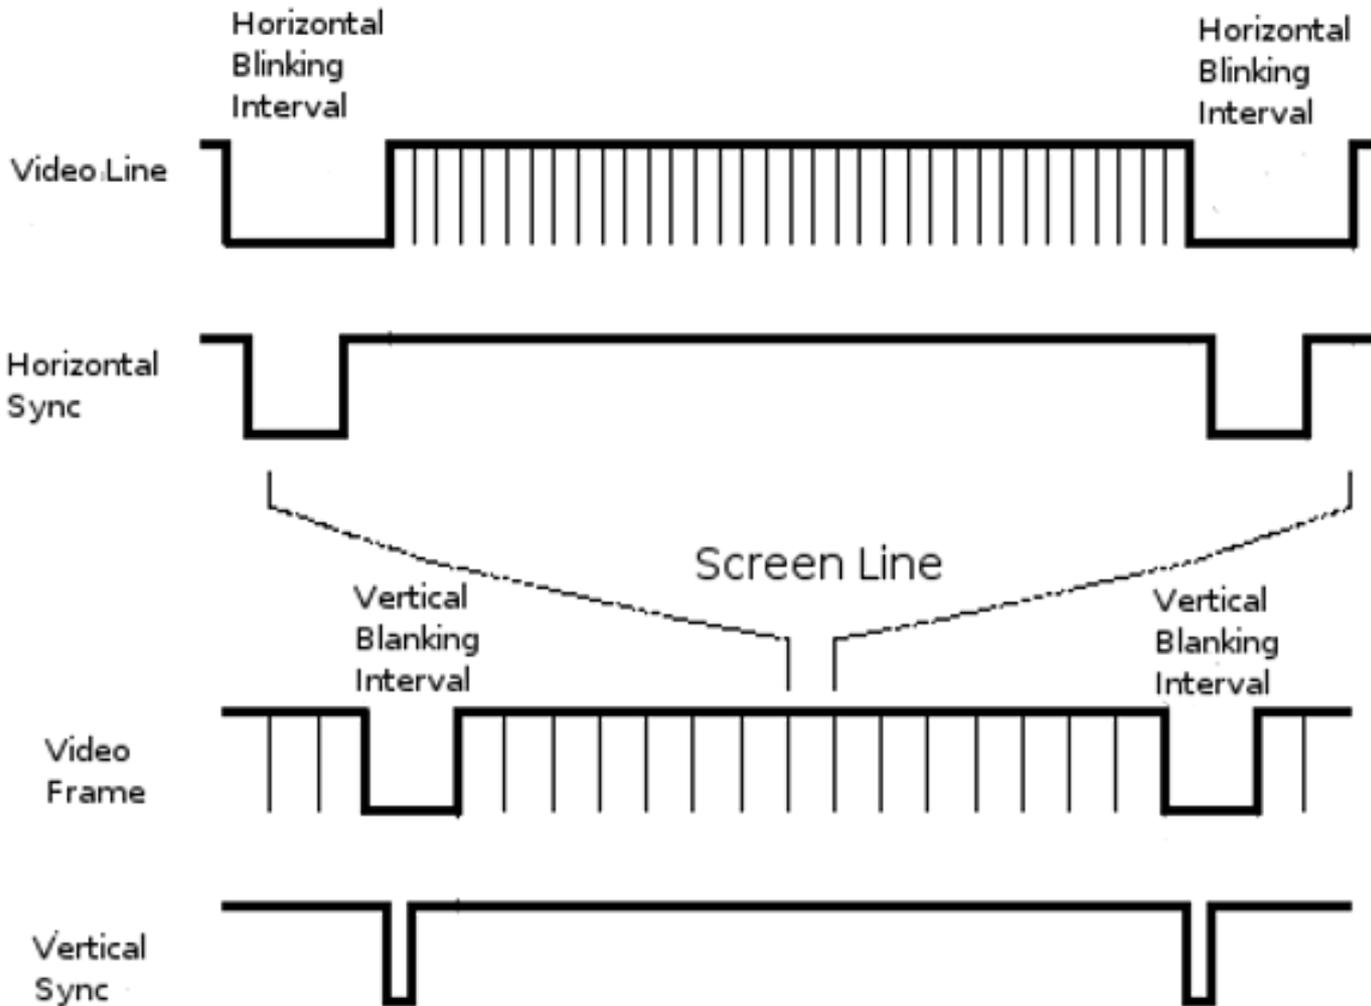

The technology used

- **Wireless networks:**
 - - Wireless trusted;
 - - Wi-Fi.
- **Industrial networks:**
 - - ModBus TCP;
 - – ModBus RTU..

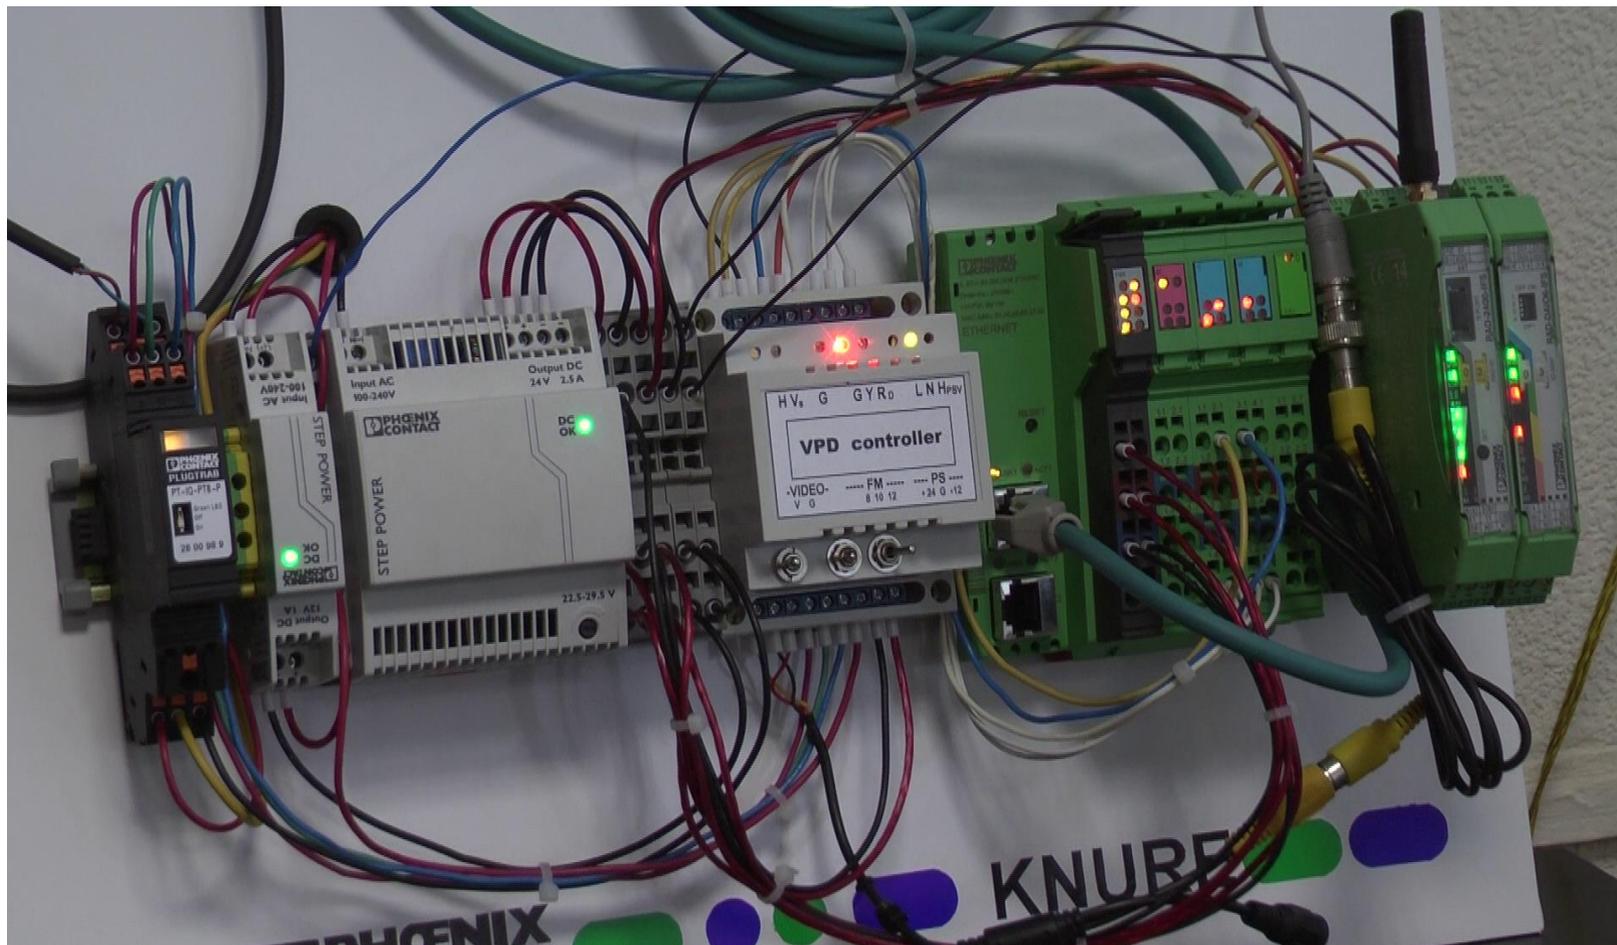

Electronic components used to make the VPD controller:

- - [IC](#) (International Rectifier., Texas Instruments, Power Integrations Inc., Infineon Technologies Ag (Siemens Semiconductors), TOSHIBA, Unitrode);
- - [Bipolar transistors](#) (International Rectifier., Texas Instruments, Fairchild Semiconductor Corp.);
- - [Field effect transistors](#) (International Rectifier., Texas Instruments, Fairchild Semiconductor Corp.);
- - [Optocouplers](#) (TOSHIBA);
- - [Zener](#) (Texas Instruments, TOSHIBA);
- - [Diode](#) (International Rectifier., TI, UC, Intersil Corporation,);
- - [Resistors](#) (Lite-On Inc., Samsung);
- - [Capacitors](#) (Lite-On Inc., Samsung Electronics,);
- - [LEDs](#) (LiteON, Samsung Electronics, Cree);
- - [Terminals](#) (KEFA).

How it works

Developed VPD –controller

The basic module for monitoring and remote control module camera with VPD – controller
